

Valves and Pumps for Extreme Environments

FOR IMMEDIATE RELEASE

November 1, 2017

## Doering Company announces lower product prices with improved quality and lead times

**Clear Lake, Minn.**—Doering Company, manufacturer of high-quality industrial valves and pumps, has announced a change to its product pricing structure. In addition to more competitive pricing, the company's success with lean manufacturing has reduced lead time from 21 days to less than 10 days for standard products. Through improved processes and retaining high-quality materials, Doering also achieves higher overall product quality while maintaining service excellence.

Customers purchasing Doering's high-quality check and needle valves with optional zero leak or 316 stainless-steel construction valves for harsh environmental application save an average of 31 percent. The company's lower prices allow for expanded distribution to markets where Doering products have not been competitive. Doering's standard 303 stainless-steel valves are now comparable in price to mild steel nickel-coated valves.

To learn about Doering's line of valves, pumps, manifolds and assemblies, visit [www.doering.com](http://www.doering.com) or contact us at +1 320.743.2276 or [info@doering.com](mailto:info@doering.com).

### Doering Company

For over 35 years, Doering Company has built a worldwide reputation for precision-designed, quality-constructed valves and pumps. The company specializes in unique industrial products to meet the most demanding performance requirements. Products are offered in a wide variety of materials, including stainless steel and Teflon®. Industry knowledge and an investment in emerging manufacturing technologies result in the development of valves and pumps previously unavailable. Doering products are offered through a network of fluid-power distributor representatives.
